

MPEG4 HD to IP / ASI Encoder & Multiplexer & DVB-T/C Modulator

Installation and Operation Instructions

HDM-4220C / HDM-4230C

Subject to technical changes w/o notification.

About This Manual

To whom it may concern

This user manual has been written to help people who have to use, to integrate and to install the product. Some chapters require some prerequisite knowledge in electronics and especially in broadcast technologies and standards.

Disclaimer

No part of this document may be reproduced in any form without the written permission of the copyright owner.

The contents of this document are subject to revision changes without notice due to continued progress in methodology, design and manufacturing. We shall have no liability for any error or damage of any kind resulting from the use of this document.

Copyrights

This document contains some confidential information. Its usage is limited to the owners of the product. It shouldn't be copied, modified, or translated in another language without prior written authorization from us.

Chapter 1 Introduction

1.1 Product Overview

This MPEG4 AVC/H.264 HD IP & ASI Encoder is a professional HD audio & video encoding and multiplexing device. It has 1x ASI-IN, 8x HDMI (=Model 8220) or 8x HD-SDI (= Model 8210) video input interfaces, supporting MPEG-4 h.264 video encoding and MPEG 1 Layer 2 audio encoding. This device can simultaneously encode 8 channel of HD audio & video; moreover, it has an IP output port and support 1 MPTS and 8 SPTS on IP out and 2x parallel ASI Out. In conclusion, its high integrated and cost effective design makes the device widely used in varieties of digital distribution systems such as cable TV digital head-end, satellite digital TV broadcasting, Digital Signage etc..

1.2 Key Features

- **4 HDMI or HD-SDI video inputs with 4 SPTS and 1 MPTS output**
- **ASI-Input to add encoded TV Services to an existing TS**
- **Support MPEG2 and MPEG4 AVC/H.264 video encoding format**
- **MPEG1 Layer II and AAC audio encoding formats, support audio gain adjustment**
- **Gigabit Ethernet IP output over UDP and RTP/RTSP, 4 x SPTS + 1 MPTS**
- **2 parallel ASI output as copy of the MPTS**
- **Null PKT Filter function**
- **PID Remapping**
- **PCR accurate adjusting**
- **PSI/SI editing Control via web management, and**
- **Management via WEB-IF or Front Panel, easy updating by web-interface**

We assume that the user is familiar with IP settings and already knows his own system to connect the unit to. If you use the **Output Streaming** feature: **We recommend using 2 separate Switches!** At least a 100BaseT for the Management NMS RJ45 port and a second one with Gigabit Ethernet 10/100/1000BaseT with at least Layer 2+ with IGMP V2 features. Otherwise you might flood your IP-Streaming network with unnecessary Data, which might overload connected IPTV STB's because they almost have only 100BaseT capacity (Never ones use 1GbE ports) but too many inputs into a STB can result in side effects. If you need to select a Switch, we recommend ARUBA HP Procurve 2530 24G or 48G which are cost effective, easy to configure, can be trunked and supporting IGMP V2. For this model it's better to check the Firmware version because sometimes the newest one has IGMP problems.

If the switch needs routing functions, the bigger brother of this series might be the right choice.

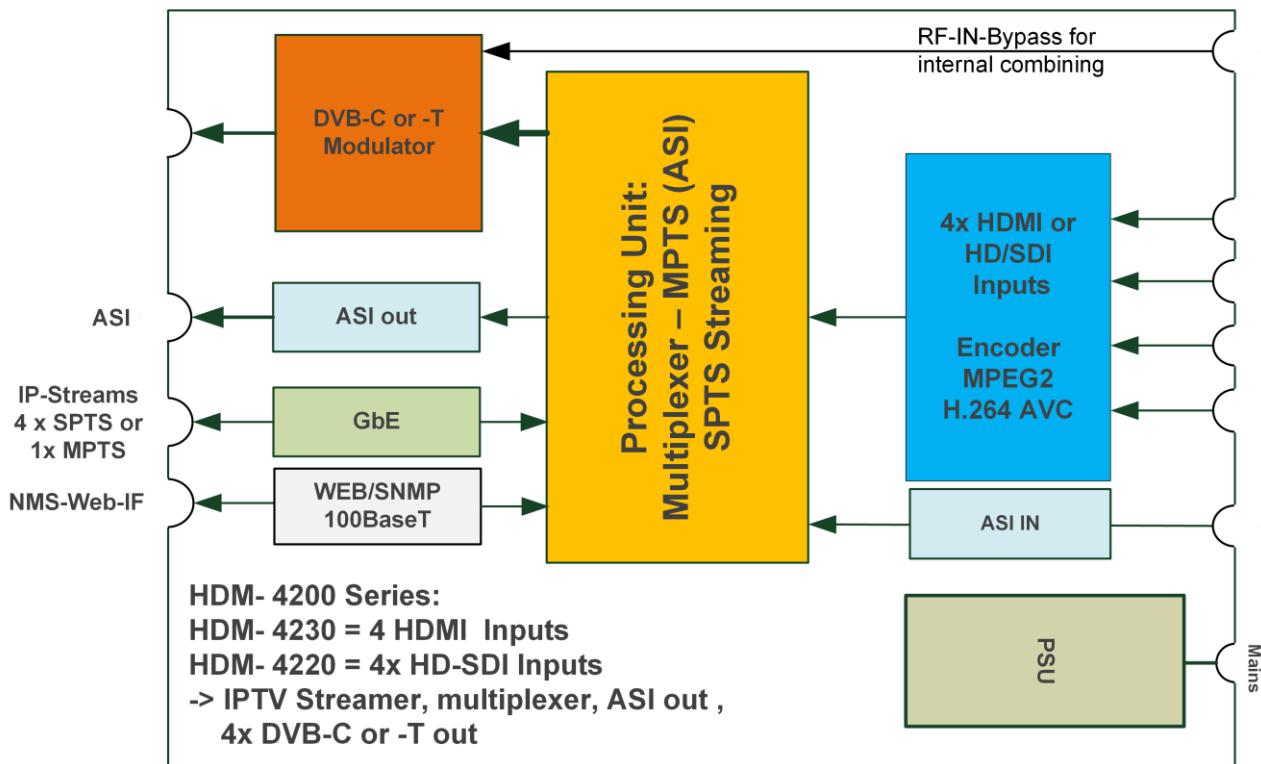

Because to not accidentally put DATA and NMS port in the same sub-network the data – port setting does not allow this by default. Usually the DATA GbE Port needs an IP address- otherwise the Switch or the receivers (i.e. IPTV STB's) cannot locate the source of the streams.

1.3 Specifications

Input	2x2 HD-SDI Inputs, ASI Input, RF IN -> RF Out internal combiner				
Video	Resolution input	1920x1080_60i, 1920x1080_50i, 1280x720_60P, 1280x720_50P, 720x576_50i, 720x480_60i, ...			
	Resolution output	Following Input or Downscaling to almost all standard formats			
Encoding		MPEG2 or MPEG-4 AVC/h.264; main-, baseline- or high level Profiles 1.2 ...5.1 selectable			
Bit-rate		0,8 Mbps...12 Mbps each channel			
Rate Control		CBR/VBR			
GOP Structure		Adjustable or automatic			
Audio	Encoding Codecs	MPEG-1 Layer 2, AAC (MPEG2) /AAC+ (MPEG4)			
	Adjustment	Gain 0....400%			
	Input enc. Selection	of Group 1...4 and Pair 1 or 2 from each SDI			
	Sampling rate	48K			
	Resolution	Max. 24-bit			
	Bit-rate setting	64kbps,128Kbps,192kbps,224kbps,256kbps, 320kbps			
Multiplexing	Function	PID remapping (automatically or manually) and PID passing from i.e. ASI IN for multiplex			
		Virtual Channel Table (VCT for DVB-C Annex B - USA)			
		NIT Generating & Insertion DVB-C Annex A/C			
		Accurate PCR adjusting			
		Generation of PSI/ SI table automatically, manual			
Stream output	4 SPTS and 1MPTS over UDP or RTP/RTSP 1x RJ45 Ethernet interface Dual parallel ASI output as copy of the created and multiplexed MPTS				
DVB-C-Output	4 adjacent channels (30 - 1000 MHz), 16...265 QAM (Annex A), 5-9 Msps, adjustable output level max. 110 dBμV (-30.0 ... -10.0 dBm), DVB-T Modulator as option (need to be set in Factory)				
System function	Network management (WEB)				
	English language				
	Ethernet software upgrade				
Miscellaneous	Dimension(W×L×H)	485mm×440mm×44.5mm			
	Approx. weight	4.5kg			
	Environment cond.	0...45 °C (working condition), -20...80 °C (Storage)			
	Power requirements	AC 100V-220V±10%, 50/60Hz			
	Power consumption	25W			

Subjects to change w/o further notice

1.4 Block Diagram

1.5 Appearance and Description

Front and Rear Panel Illustration

From Left to Right: Display, GbE-DATAPort, NMS Management port, status LED's, Keypad, Enter-Button, Menu-, Lock- Unlock- Button

2x Modules either double HDMI or double SDI-inputs with extra screw-mounting, RF-Input RF-Output, ASI-IN, 2x ASI Out, ON/OFF- switch, Power plug, Grounding connector screw

(HDM-4320C HDMI instead of HD-SDI BNC – Input modules)

Chapter 2 Installation Guide

This section is to explain the cautions the users must know in some case that possible injure may bring to users when it's used or installed. For this reason, please read all details here and make in mind before installing or using the product.

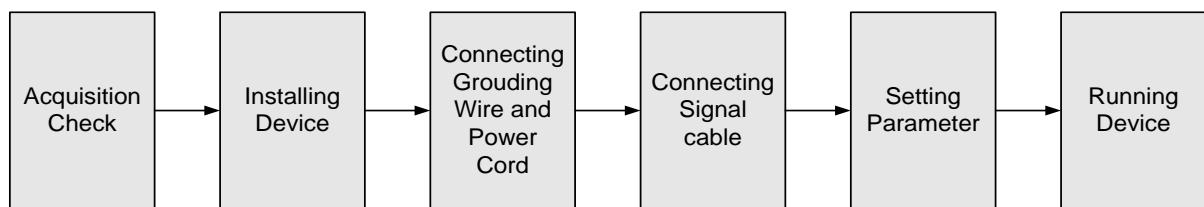

2.1 General Precautions

- Must be operated and maintained free of dust or dirty.
- The cover should be securely fastened, do not open the top case of the products when the power is on.
- After use, securely stow away all loose cables, external antenna, and others.

2.2 Power precautions

- When you connect the power source, make sure to not overload it.
- Avoid operating on an open wet floor. Make sure the extension cable is in good condition
- Make sure the power switch is off before you start to install the device

2.3 Device's Installation Flow Chart:

2.4 Environmental Requirements

Item	Requirement
Machine Hall Space	When user installs machine frame array in one machine hall, the distance between 2 rows of machine frames should be 1.2...1.5m and the distance against wall should be no less than 0.8m.
Machine Hall Floor	Electric Isolation, Dust Free Volume resistivity of ground anti-static material: $1\times 10^7 \dots 1\times 10^{10} \Omega$, Grounding current limiting resistance: $1M\Omega$ (Floor bearing should be greater than $450Kg/m^2$)
Environment Temperature	5...40°C (sustainable), 0...45°C (short time), installing air-conditioning is recommended
Relative Humidity	20%...80% sustainable 10%...90% short time
Pressure	86...105KPa
Door & Window	Installing rubber strip for sealing door-gaps and dual level glasses for window
Wall	It can be covered with wallpaper, or brightness less paint
Fire Protection	Fire alarm system and extinguisher
Power	Requiring device power, air-conditioning power and lighting power are independent to each other. Device power requires AC $110V \pm 10\%$, 50/60Hz or AC $220V \pm 10\%$, 50/60Hz. Please carefully check before running.

2.5 Grounding Requirement

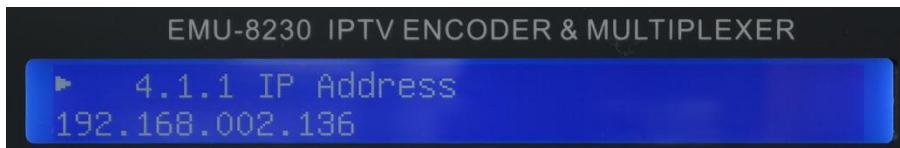

- For safe function all modules' or the Chassis should be grounded: That is the basis of reliability and stability of devices. Also, they are the most important guarantee of lightning arresting and interference rejection.
- Grounding connection must be installed with a copper conductor in order to reduce high frequency impedance, and the grounding wire must be as thick and short as possible.
- Users should make sure the 2 ends of grounding wire are well electric conducted and not corrosive.
- It is prohibited to use any other device as part of grounding electric circuit
- The area of the conduction between grounding wire and device's frame 19" rack should be not less than 16 better 25 mm².

Chapter 3 WEB Interface Setup

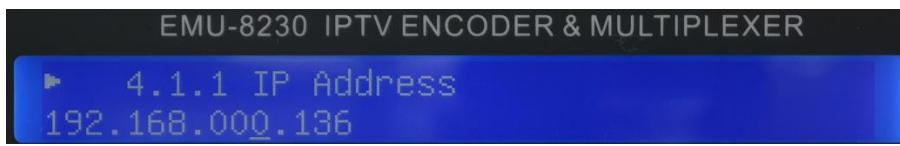

The user can control this device and setup the configuration by a computer connected to the device to its web NMS Port. The user should ensure that the computer's IP address is different from the other device's IP address, otherwise, it would cause IP conflicts.

3.1 Encoder login

The default IP address of this device is 192.168.0.136 -> Please check the front panel LC Display and change to Network by **UNLOCK** the Keypad with pressing LOCK-Key once than MENU and use the arrow keys to navigate and ENTER Key to access the submenus. You can always return back by MENU-Key. These pictures are from another device but similar and shown as examples:

Select - change

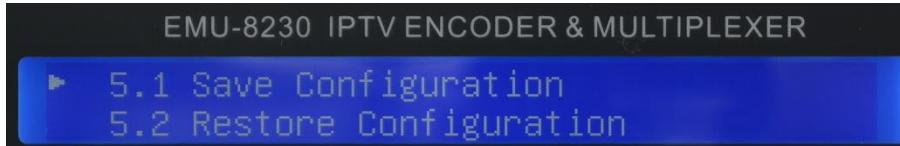

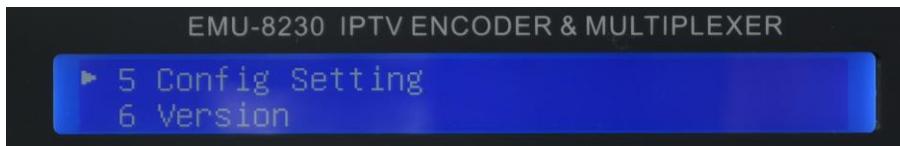

-> ENTER

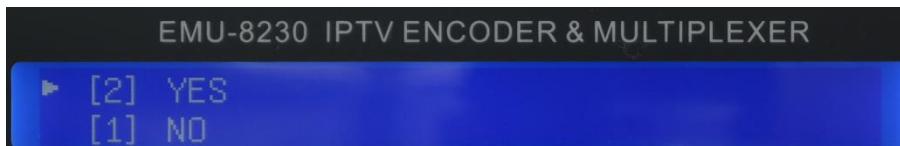

change IP address

of the GbE DATA Port to your needs

SAFE it please.

CONFIRM it.

Saving, please wait:
erasing...

For some values, a reboot should be considered to enable the settings and take effect. Almost all of the needed settings can be accessed by the Front panel w/o Web-IF. The Menu structure is nearly self-explaining.

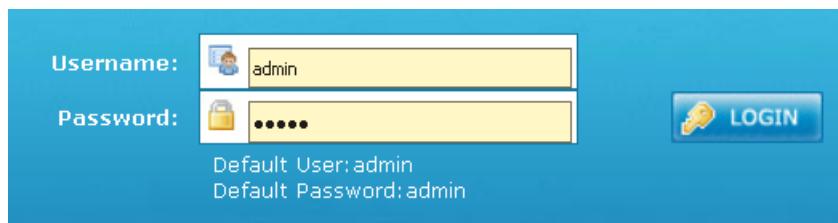

Connect the PC (Personal Computer) and the device with network cable directly (Check usage of crosslink cable eventually or network interface should support MDI/MDX), or using a at least Fast Ethernet 100BaseT switch and use a "ping" command to confirm they are on the same network segment.

I.e. the PC IP address is 192.168.99.252, we then change the device IP to 192.168.02.xxx (xxx can be 1 to 254 except 252 to avoid an IP conflict) according to the EMU IP.

Use your web browser like Firefox, to connect the device with your PC/Laptop by entering the URL of the Encoder & Modulator's IP address in the browser's address bar and press Enter:

A Popup will show the Login interface. Insert the Username and Password (Both default Username and Password are "admin") and then click OK to enter the device setting menu.

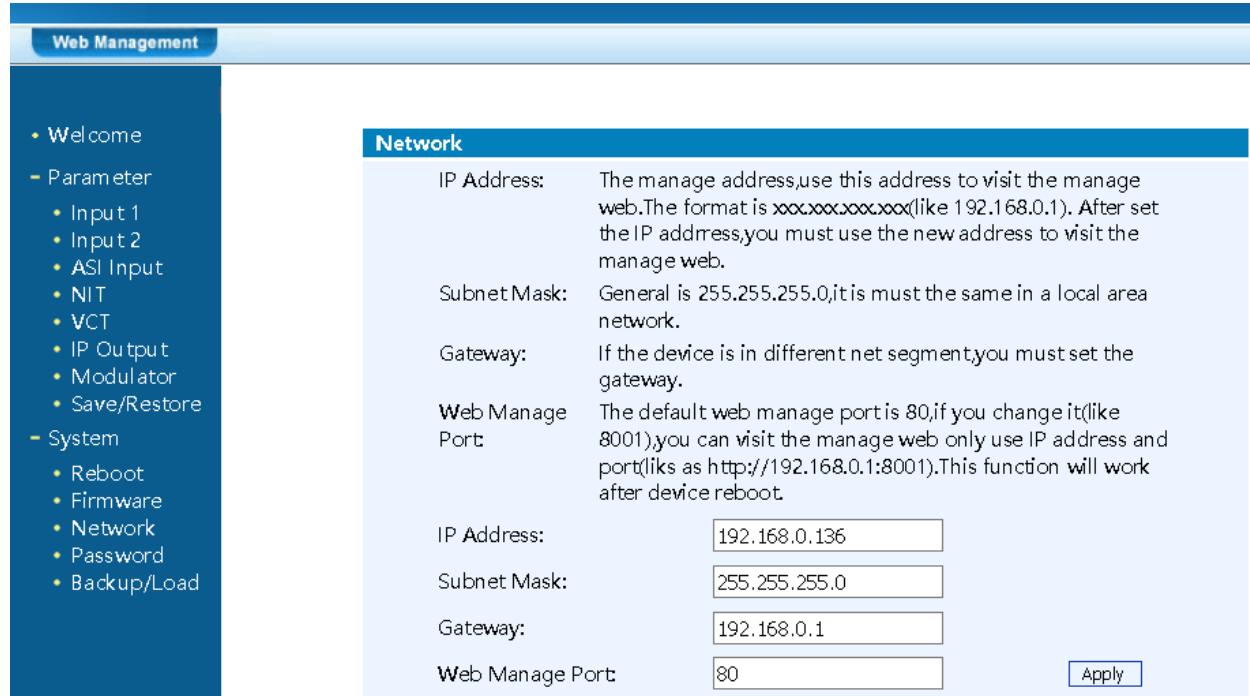

Note: We recommend using the newest version of the browser Firefox.

3.1.1 Network configuration basics:

NMS and DATA port should not use the same subnet at all. It checks whether these settings are correct and separated - otherwise it refuses.

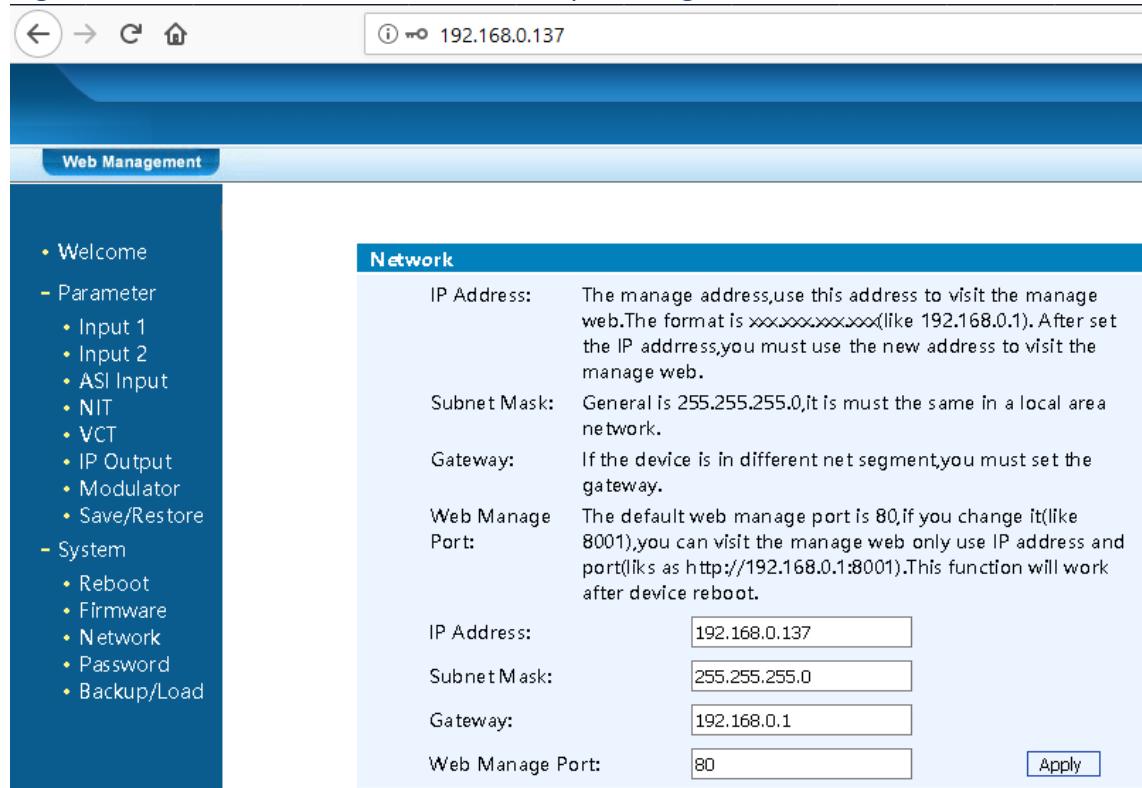

The problem is that both RJ45 are not secured against a loop. The solution is that you need to separate the NMS from the Streaming network as described before. Network Menu:

Network	
IP Address:	The manage address,use this address to visit the manage web.The format is xxxx.xxxx.xxxx.xxxx(like 192.168.0.1). After set the IP address,you must use the new address to visit the manage web.
Subnet Mask:	General is 255.255.255.0,it is must the same in a local area network.
Gateway:	If the device is in different net segment,you must set the gateway.
Web Manage Port:	The default web manage port is 80;if you change it(like 8001),you can visit the manage web only use IP address and port(like as http://192.168.0.1:8001).This function will work after device reboot.
IP Address:	192.168.0.136
Subnet Mask:	255.255.255.0
Gateway:	192.168.0.1
Web Manage Port:	80
Apply	

The change will immediately take effect after confirming it with SET button. So you need to login with the new IP address here as example changed to 192.168.0.137:

The change will immediately take effect after confirming it with SET button. So you need to login with the new IP address here as example changed to 192.168.0.137:

Follow this rule to physically separate the Ethernet ports (Example with another Encoder but similar to handle):

You can configure the device IP addresses as following:

- First connect the NMS port **only (see above)**, than change that to your needs: Both DATA and NMS port can be independently configured.

The DATA Streaming port has to be configured in the IP Output section:

Web Management

- Welcome
- Parameter
 - Input 1
 - Input 2
 - ASI Input
 - NIT
 - VCT
 - IP Output
 - Modulator
 - Save/Restore
- System
 - Reboot
 - Firmware
 - Network
 - Password
 - Backup/Load

IP Output Configuration

IP Output Enable(1/2/3/4/M):	<input checked="" type="checkbox"/>				
Filter Null Pkt(1/2/3/4/M):	<input checked="" type="checkbox"/>				
SPTS1	224.2.2.2	Port:22340	Protocol:	UDP	TTL:128
SPTS2	224.2.2.3	Port:22360	Protocol:	UDP	TTL:128
SPTS3	224.2.2.4	Port:22380	Protocol:	UDP	TTL:128
SPTS4	224.2.2.5	Port:22400	Protocol:	UDP	TTL:128
MPTS	224.2.2.6	Port:22420	Protocol:	UDP	TTL:128
Service IP:	192.168.1.137				
Subnet Mask:	255.255.255.0				
Gateway:	192.168.1.1				

Default **Apply**

Change to your needs, change/set the values:

Change to your needs and avoid same subnet - means 192.168.0.x is forbidden for the DATA port or should be avoided.

If you change the Gateway, you probably need to reboot to enable that. But SAVE before reboot ;-).

So go to SAVE the configuration is always a good idea (for next booting safely with the already done configuration):

Web Management

- Welcome
- Parameter
 - Input 1
 - Input 2
 - ASI Input
 - NIT
 - VCT
 - IP Output
 - Modulator
 - Save/Restore
- System
 - Reboot
 - Firmware
 - Network
 - Password
 - Backup/Load

Save Configuration

When you change the parameter,you shoud save configuration ,otherwise the new configuration will lost after reboot.

Saving ... **Save config**

Restore Configuration

Load latest saved configuration,after click the "Restore" then please click the "Save config" button,otherwise the "Restore" parameter will lost after reboot.

Restore

Factory Set

Set all configuration back to default, after click the "Factory Set" then please click the "Save config" button,otherwise the default parameter will lost after reboot.

Factory set

And you are good to go.

If you need to check the outgoing streams, set your PC into same network range like the DATA port.

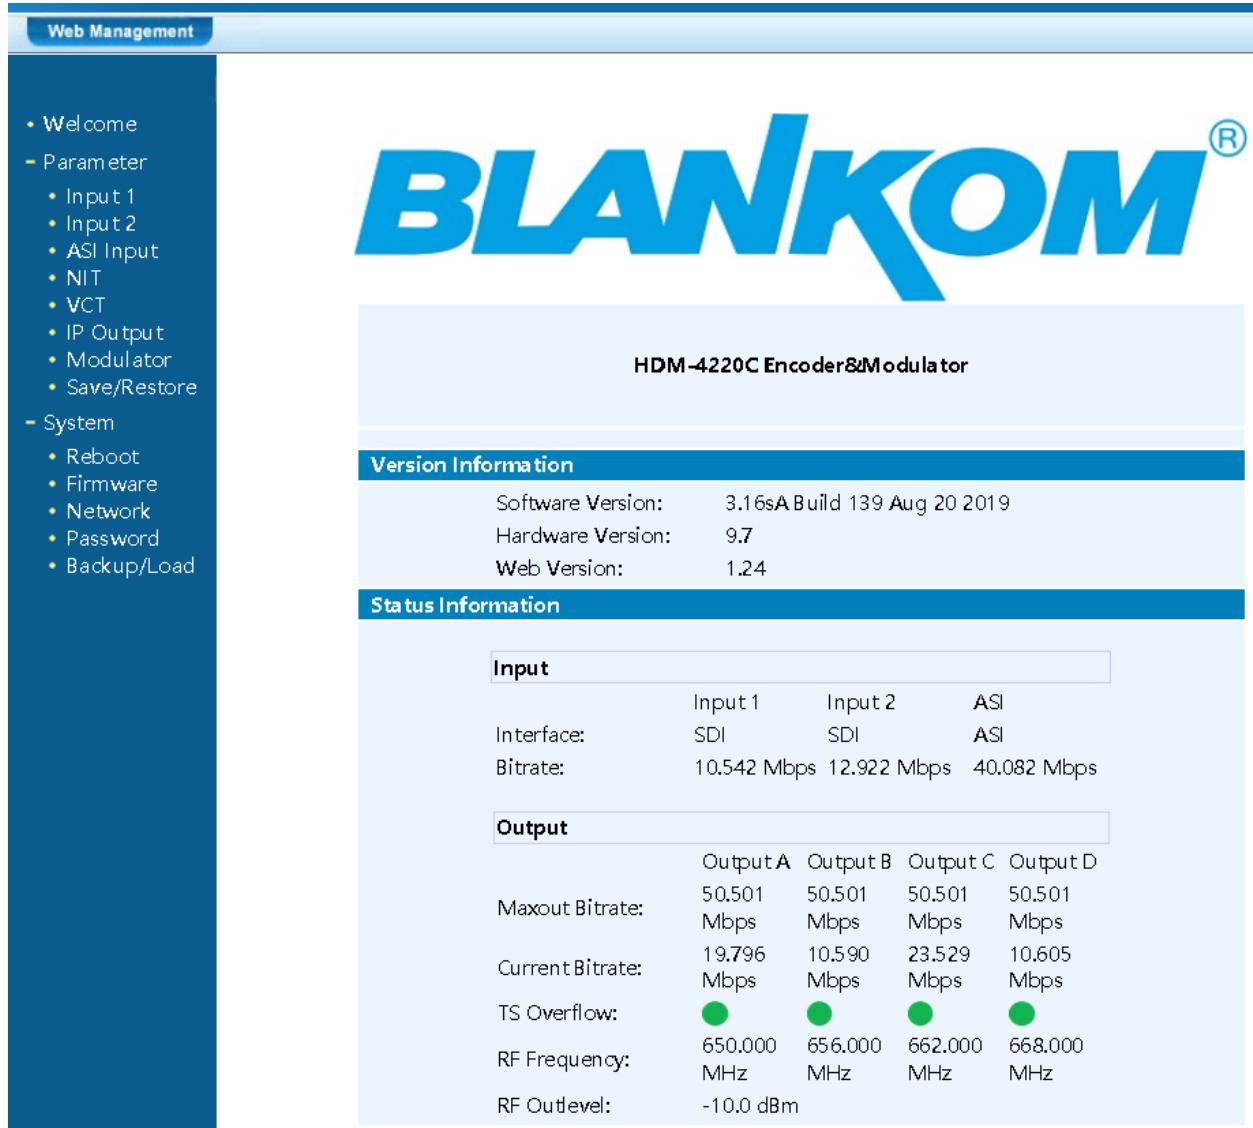

But: Consider the need to change your Ethernet cable from the management Switch to the Streaming Switch and double IP address settings in your PC to both ranges.

Intelligent switches with Loop detection can also be used i.e. if you separate the Network ports by VLAN's. You will find some more about streaming things at the end of this manual. Note: If you have set more than 2 IP ranges in your PC and try to get the Streams by VLC: VLC is somehow stupid and do not recognize via which Ethernet (RJ45 or WIFI) IP address –Source it can grab the Stream. The difference is to manually set the METRIC values: The lower the Value the higher the priority for that interface IP address.

3.2 General Setup

Status

After login into the encoder, you start with the status interface:

The screenshot shows the 'Web Management' interface for the BLANKOM HDM-4220C Encoder & Modulator. The left sidebar contains a navigation menu with the following items:

- Welcome
- Parameter
 - Input 1
 - Input 2
 - ASI Input
 - NIT
 - VCT
 - IP Output
 - Modulator
 - Save/Restore
- System
 - Reboot
 - Firmware
 - Network
 - Password
 - Backup/Load

The main content area features the large BLANKOM logo. Below it, the device identifier is shown as "HDM-4220C Encoder&Modulator".

Version Information

Software Version:	3.16sA Build 139 Aug 20 2019
Hardware Version:	9.7
Web Version:	1.24

Status Information

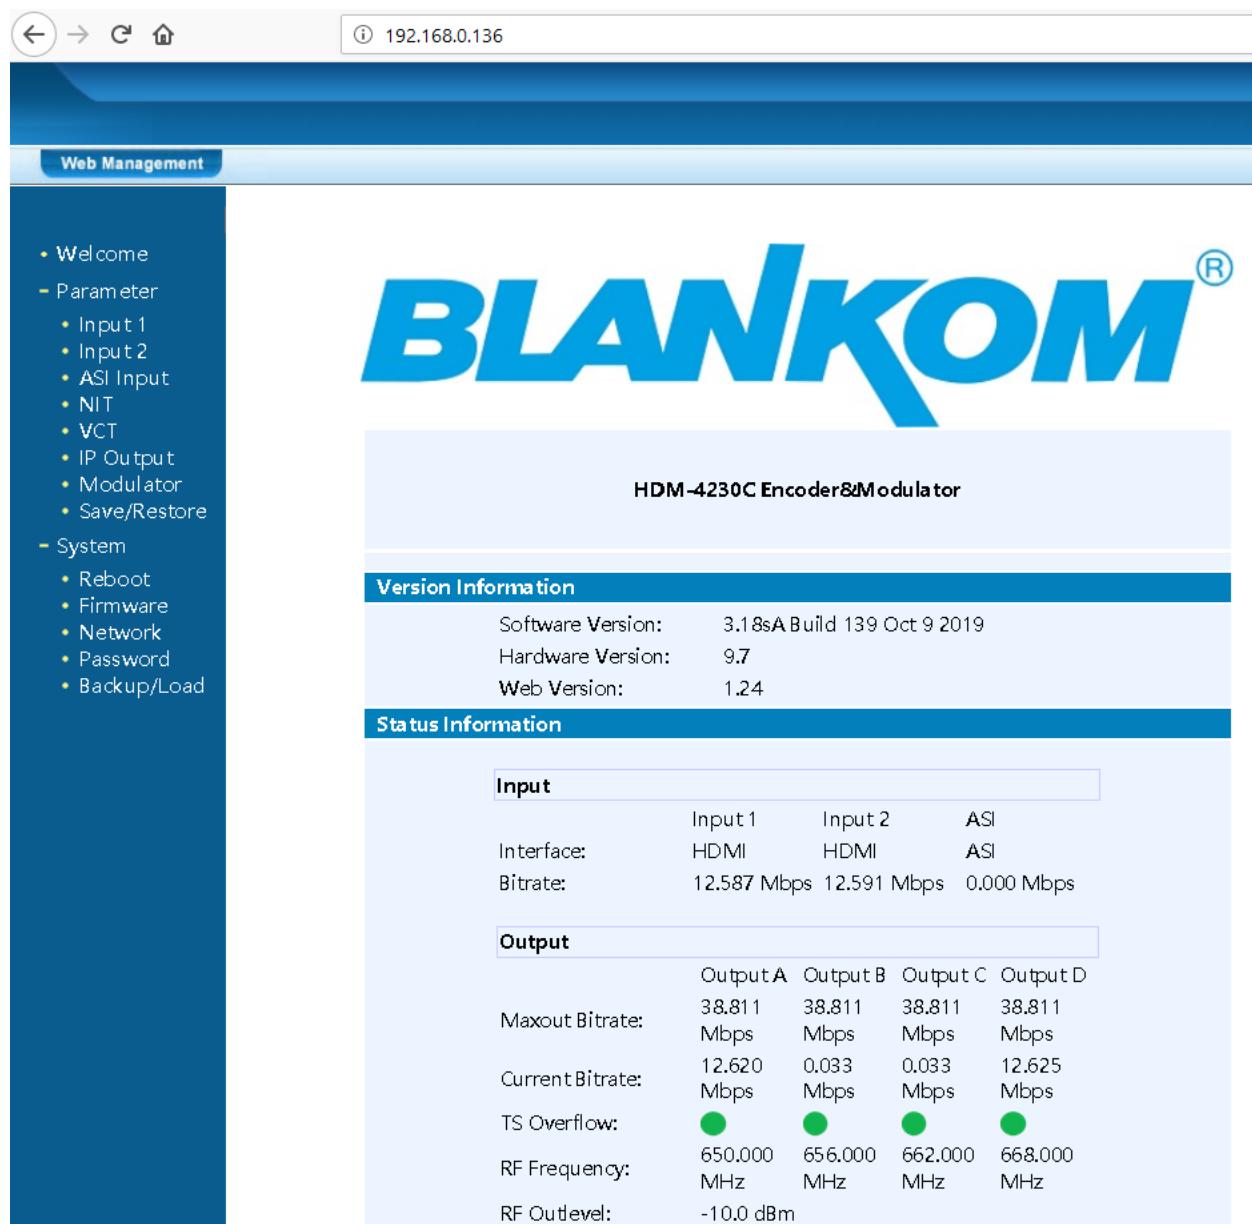

Input

	Input 1	Input 2	ASI
Interface:	SDI	SDI	ASI
Bitrate:	10.542 Mbps	12.922 Mbps	40.082 Mbps

Output

	Output A	Output B	Output C	Output D
Maxout Bitrate:	50.501 Mbps	50.501 Mbps	50.501 Mbps	50.501 Mbps
Current Bitrate:	19.796 Mbps	10.590 Mbps	23.529 Mbps	10.605 Mbps
TS Overflow:	●	●	●	●
RF Frequency:	650.000 MHz	656.000 MHz	662.000 MHz	668.000 MHz
RF Outlevel:	-10.0 dBm			

HDM-4230C:

The screenshot shows the web management interface for the BLANKOM HDM-4230C. The left sidebar contains a navigation menu with options like Welcome, Parameter (Input 1, Input 2, ASI Input, NIT, VCT, IP Output, Modulator, Save/Restore), and System (Reboot, Firmware, Network, Password, Backup/Load). The main content area features the large BLANKOM logo at the top, followed by the product name "HDM-4230C Encoder&Modulator". Below this are two sections: "Version Information" and "Status Information".

Version Information

Software Version:	3.18sA Build 139 Oct 9 2019
Hardware Version:	9.7
Web Version:	1.24

Status Information

Input

	Input 1	Input 2	ASI
Interface:	HDMI	HDMI	ASI
Bitrate:	12.587 Mbps	12.591 Mbps	0.000 Mbps

Output

	Output A	Output B	Output C	Output D
Maxout Bitrate:	38.811 Mbps	38.811 Mbps	38.811 Mbps	38.811 Mbps
Current Bitrate:	12.620 Mbps	0.033 Mbps	0.033 Mbps	12.625 Mbps
TS Overflow:				
RF Frequency:	650.000 MHz	656.000 MHz	662.000 MHz	668.000 MHz
RF Outlevel:	-10.0 dBm			

Note: We recommend to control and check the configured Transport-Stream Values with a TS analyser like a DekTec Fantasi (can be obtained from IRENIS GmbH) and the corresponding Software like stream-Expert either at the ASI out and / or the SPTS and MPTS streams.

This Example here has an additional ASI TS Input and is shown after the ENCODERS:

• Welcome
- Parameter
 • Input 1
 • Input 2
• ASI Input
 • NIT
 • VCT
 • IP Output
 • Modulator
 • Save/Restore
- System
 • Reboot
 • Firmware
 • Network
 • Password
 • Backup/Load

1CH ASI Configuration (EN06)

Input Program	Output Program
<input checked="" type="radio"/> A <input type="radio"/> B <input type="radio"/> C <input type="radio"/> D <input type="radio"/> E <input checked="" type="checkbox"/> 1 BBC World News Europe HD <input type="checkbox"/> 2 INSIGHT TV HD <input type="checkbox"/> 3 INSIGHT TV HD INT <input type="checkbox"/> 4 NHK WORLD-JPN <input type="checkbox"/> 5 Al Jazeera English HD <input type="checkbox"/> 6 MB LIVE	<input type="checkbox"/> 1 BBC World News Europe HD <input type="radio"/> Passthrough <input checked="" type="radio"/> Multiplex <input type="button" value="Refresh Input"/> <input type="button" value="Refresh Output"/> <input type="button" value="Select Program"/> <input type="button" value="Cancel Program"/> <input type="button" value="All Input"/> <input type="button" value="All Output"/>

Parse timeout seconds

An ASI TransportStream is always and every time with ConstantBitRate (CBR) which depends from its source.
To view the ASI Input-content you need to press Set Tuner and or before Refresh the Input:

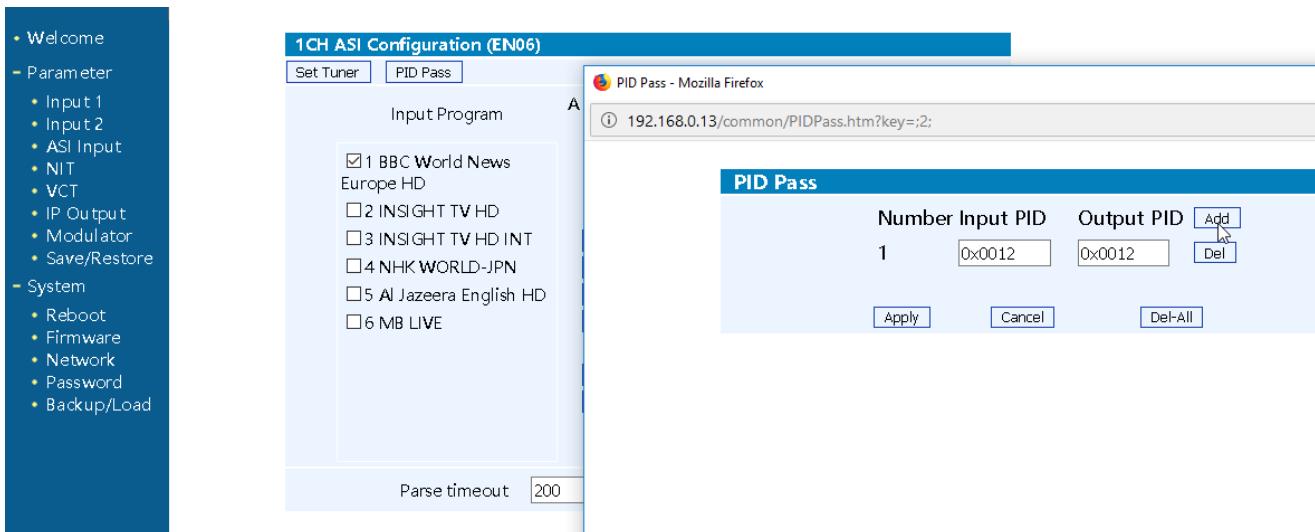

1CH ASI Configuration (EN06)

Input Program	Output Program
<input checked="" type="radio"/> A <input type="radio"/> B <input type="radio"/> C <input type="radio"/> D <input type="radio"/> E <input checked="" type="checkbox"/> 1 BBC World News Europe HD <input checked="" type="checkbox"/> 2 INSIGHT TV HD <input checked="" type="checkbox"/> 3 INSIGHT TV HD INT <input checked="" type="checkbox"/> 4 NHK WORLD-JPN <input checked="" type="checkbox"/> 5 Al Jazeera English HD <input checked="" type="checkbox"/> 6 MB LIVE	<input type="radio"/> Passthrough <input checked="" type="radio"/> Multiplex <input type="button" value="Refresh Input"/> <input type="button" value="Refresh Output"/> <input type="button" value="Select Program"/> <input type="button" value="Cancel Program"/> <input type="button" value="All Input"/> <input type="button" value="All Output"/>

Parse timeout seconds

Than select to pass through or Multiplex

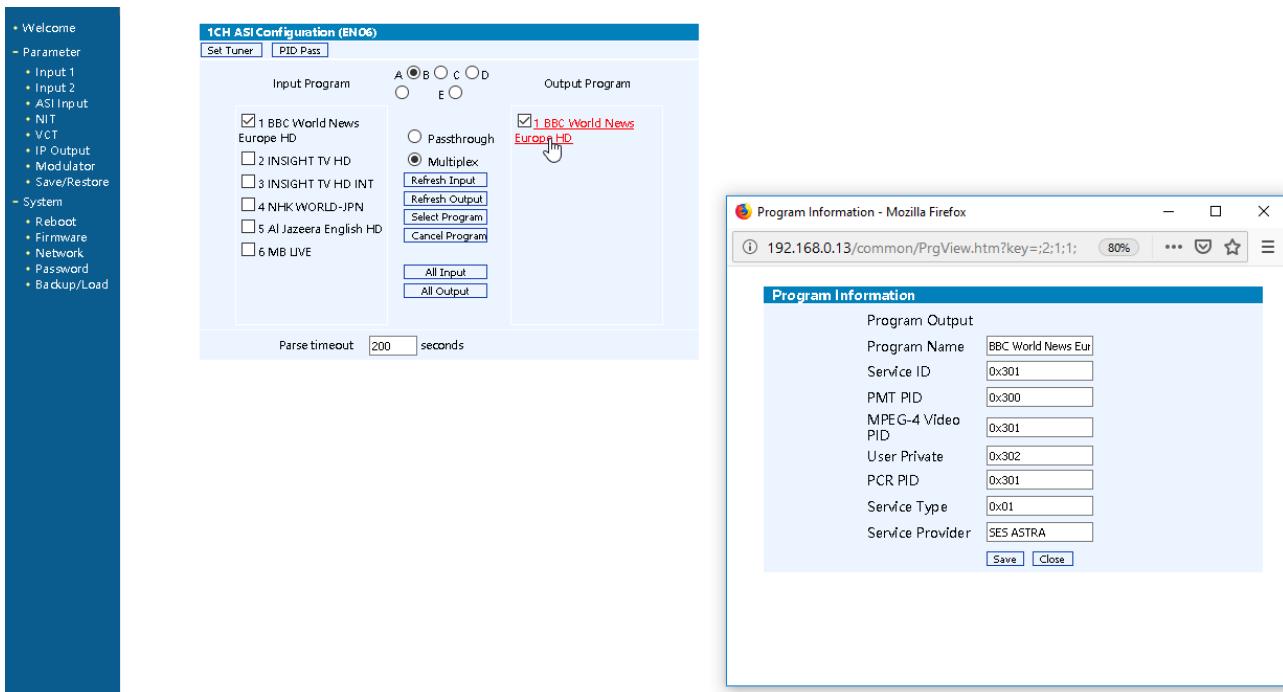

Here you can mix an Input TS with the encoded Services, select the outputs to go with and even can pass PID's from ASI TS manually: A Popup Window will appear (please set your browser to support or allow Popups!!!!)

• Welcome
 • Parameter
 • Input 1
 • Input 2
 • ASI Input
 • NIT
 • VCT
 • IP Output
 • Modulator
 • Save/Restore
 - System
 • Reboot
 • Firmware
 • Network
 • Password
 • Backup/Load

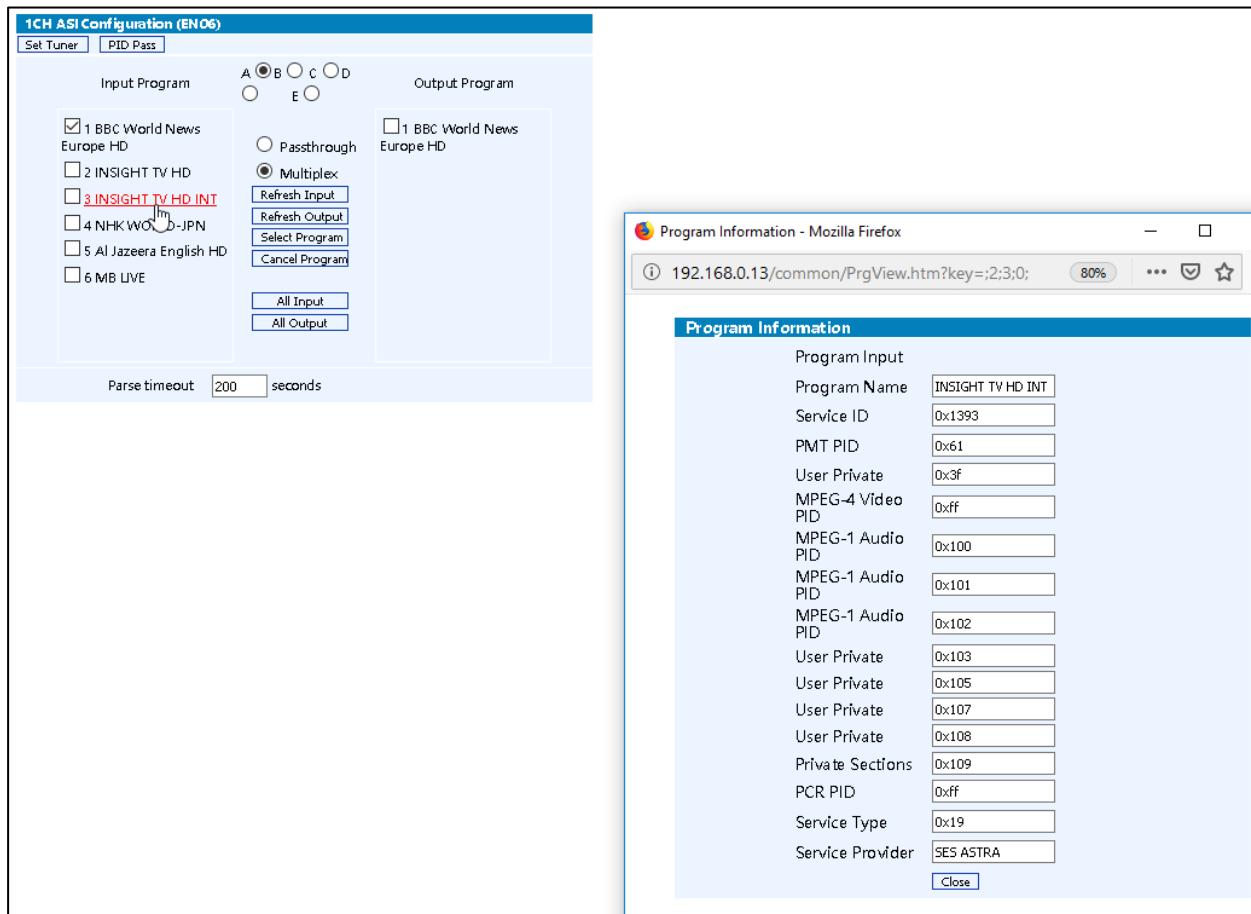

Example to pass the EIT Table from the ASI Input to the new multiplexed output see above,
ADD PID 0x0012 (hex) (= PID 18 dec).

Selecting a Service in the ASI will popup its information which can be edited:

• Welcome
 • Parameter
 • Input 1
 • Input 2
 • ASI Input
 • NIT
 • VCT
 • IP Output
 • Modulator
 • Save/Restore
 - System
 • Reboot
 • Firmware
 • Network
 • Password
 • Backup/Load

With the Multiplex function you can add the encoded Services to an existing transport stream coming in from ASI and push that out to ASI 1+2 and in parallel to an MPTS output. Be careful to set the Bitrate for the CBR MPTS output accordingly. Encoder bitrates 1...4...8 + incoming data rate from ASI IN + approximately 15% overhead to avoid peaks in the variable services bitrates disturbing all of the output services. Maximum ASI-out net output rate = 213 Mb/s.

Encoder Setups

The encoder is equipped with 2x dual encoder modules with HDMI or HD-SDI inputs. From the menu on the Top of the webpage select the modul1 or 2 and it shows the information of the 2 encoding channel:

• Welcome
- Parameter
• <u>Input 1</u>
• Input 2
• ASI Input
• NIT
• VCT
• IP Output
• Modulator
• Save/Restore
- System
• Reboot
• Firmware
• Network
• Password
• Backup/Load

2CH Mpeg 2/H.264 HD Encoder Configuration (EN14)

Video Format	H.264	Mpeg2
Aspect Ratio	Auto	Auto
Low delay	Manual	Normal
Video BitRate(Mbps)	12.000	12.000
DTS Delay	200 (1-500)	200 (1-500)
GOP Bframe	2 (<=3)	2 (<=3)
Gop Pframe	4 (<=6)	4 (<=6)
H264 Profile	High Profile	Main Profile
H264 Level	Level 5.1	Level 3.1
Auto Config	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Resolution	1920*1080_60i	1920*1080_50i
Audio Format	Mpeg2	Mpeg4 AAC
Dialog Normalization	-31 (-31 - -1)dB	-31 (-31 - -1)dB
Audio BitRate	320 Kbps	192 Kbps
Audio Gain(0-400%)	100%	100%
Audio Group	Group 1	Group 4
Audio Pair	Pair 1	Pair 2
Program Out Enable(ABCDE)	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/> <input checked="" type="checkbox"/> <input checked="" type="checkbox"/> <input checked="" type="checkbox"/> <input type="checkbox"/>
Service Provider	TV-Provider	TV-Provider
Program Name	TV-101	TV-102
Service ID	0x101	0x102
PMT PID	0x100	0x104
Video PID	0x101	0x105
Audio PID	0x102	0x106
PCR PID	0x103	0x107
Video:		
Video Format:	1920x1080 50i	unknown
Encoding:		
Bitrate:	5.401 Mbps	0.000 Mbps
Rom Version:	6.1.2.211	6.1.2.211

These settings are almost self-explaining. The PID-values are always to consider as HEX please and you should avoid overlapping's or double setups for the TV services. We assume, that you are an expert in DVB. Otherwise make yourself familiar before screwing up the machine.

HDM-4320C HDMI configuration:

These slightly differ from the HD-SDI port inputs ... naturally....:

Because HDMI contains only 1 Audio Signal instead of several like HD-SDI can contain.

NIT Insert

Output A	B	C	D	E			
<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>			
Close NIT <input checked="" type="checkbox"/>							
Network Name	<input type="text" value="Myself"/>		Network ID	<input type="text" value="0x0001"/>			
Transport Stream ID	<input type="text" value="0x0001"/>		Original Network ID	<input type="text" value="0x0001"/>			
European	<input checked="" type="radio"/>	NorDig V1	<input type="radio"/>	NorDig V2	<input type="radio"/>		
Private Data	<input type="text" value="0x00000000"/>						
TSID	ONID	Freq(MHz)	Const	SymbolRate	LCN	<input type="button" value="Add"/>	<input type="button" value="Del-All"/>
				<input type="button" value="Help"/>	<input type="button" value="Update NIT"/>	<input type="button" value="Clear NIT"/>	

In this menu the output TS NIT of all RF channels and the ASI TS can be configured and manually edited. A Popup will appear after pressing ADD.

NOTE: The POPUP Blocker in your Browser should be disabled.

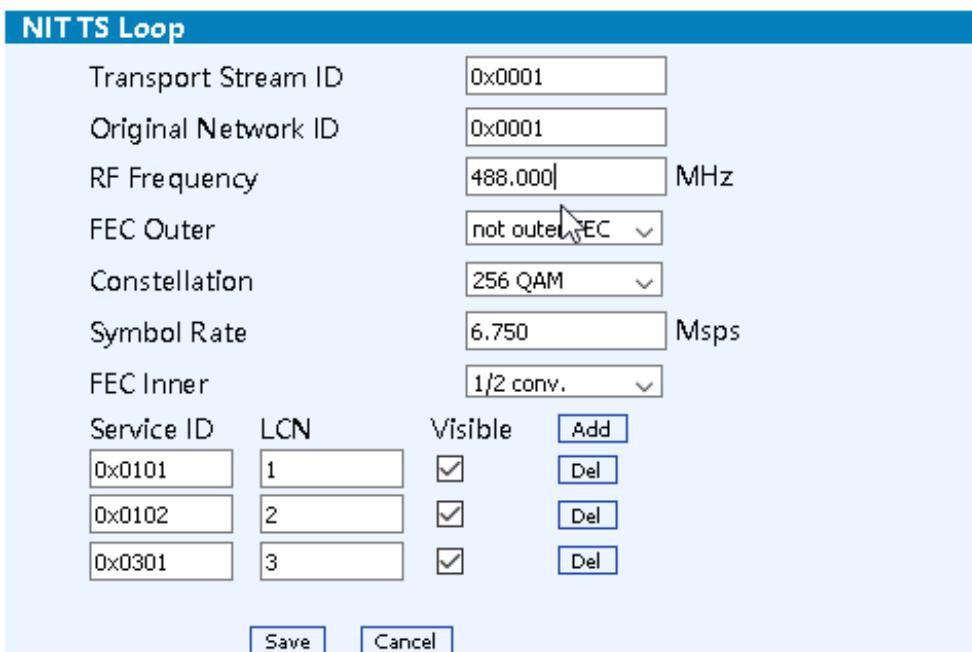

You should set this according to the existing network values of your CATV frequencies.

Logical channels number can be assigned to your 4 Service ID's and you can add more ...

Do not forget to save...

Add next frequency (do insert the Frequency as Kilohertz example: 488 MHz = 480.000):

This window is titled 'NIT TS Loop' and contains fields for Transport Stream ID (0x0001), Original Network ID (0x0001), RF Frequency (488.000 MHz), FEC Outer (not outer FEC), Constellation (256 QAM), Symbol Rate (6.750 Msps), and FEC Inner (1/2 conv.). It also lists Service ID (0x0101, 0x0102, 0x0301) and LCN (1, 2, 3) with checkboxes for visibility. Buttons for Add, Save, and Cancel are at the bottom.

Please make yourself familiar what is the NIT and how to setup it.

The NIT can be chosen as compatible format according to NorDig V1 or V2 standard or European Version:

NIT Insert

Output A B C D E

Close NIT

Network Name	Myself	Network ID	0x0001

Channels Loop

Modulation Mode				
Carrier Frequency				
Channel TSID	0x0001			
Program Number	Short Name	Major Channel Number	Minor Channel Number	Source ID
0x0101		1	1	0x0001
0x0102		1	2	0x0001
0x0301		1	3	0x0001

You can skip that or let it empty in Europe.

Example for an inserted NIT:

SetNIT - Mozilla Firefox

192.168.0.136/SetNIT.htm?key=:AddTSLoop;255;0; 80% ⋮ ☰

NIT TS Loop

Transport Stream ID	0x0001		
Original Network ID	0x0001		
RF Frequency	650.000 MHz		
FEC Outer	not outer FEC		
Constellation	256 QAM		
Symbol Rate	6.850 Msps		
FEC Inner	1/2 conv.		
Service ID	LCN	Visible	Add
0x0101	1	<input checked="" type="checkbox"/>	<input type="button" value="Del"/>
0x0000	2	<input checked="" type="checkbox"/>	<input type="button" value="Del"/>
0x0000	3	<input checked="" type="checkbox"/>	<input type="button" value="Del"/>
0x0000	4	<input checked="" type="checkbox"/>	<input type="button" value="Del"/>
0x0000	5	<input checked="" type="checkbox"/>	<input type="button" value="Del"/>
0x0000	6	<input checked="" type="checkbox"/>	<input type="button" value="Del"/>

The service ID's need to be adjusted according to your encoded TV services and their SID's (in Hex values):

Service ID	LCN	Visible	Add
0x0101	1	<input checked="" type="checkbox"/>	<input type="button" value="Del"/>
0x0000	2	<input checked="" type="checkbox"/>	<input type="button" value="Del"/>
0x0000	3	<input checked="" type="checkbox"/>	<input type="button" value="Del"/>
0x0000	4	<input checked="" type="checkbox"/>	<input type="button" value="Del"/>
0x0000	5	<input checked="" type="checkbox"/>	<input type="button" value="Del"/>
0x0000	6	<input checked="" type="checkbox"/>	<input type="button" value="Del"/>

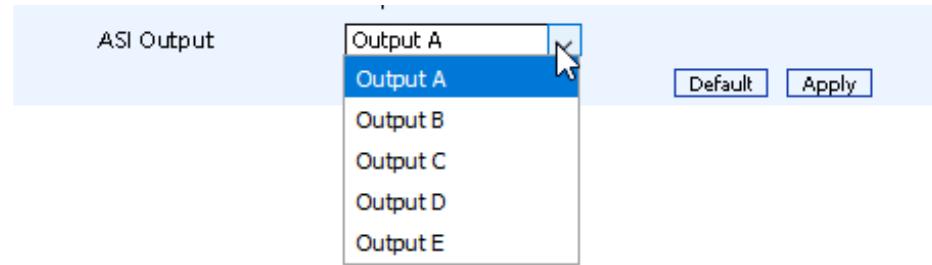

If there is an existing Network and you add these 4 QAM channels to it, you can combine the existing NIT (Like coming from a Cable Operator like KDG/Vodafone or any other) with your HDM.

With changed values for the FEC (outer) ...

Usually the TV set would not update it's NIT except you perform a manual tuning to one of these channels where you have inserted the NIT of this device. Some TV sets will only be store one NIT, and if you need the using of a NIT in your Coax-CATV network we recommend to place these extra inserted QAM DVB-C Channels in a free 4 channel range as lowest as possible by i.e. using a Band-Filter (to exclude these bandwidth and later add this 4x RF channels and combine both networks after or in it).

The TV sets (or DVB-C STB's) would read the NIT from the first RF QAM channel they will find (i.e. @ around 306MHz which is a common Value in particular with a cable operator using

Internet with DOCSIS 3.1). Than they store it and they might not find all Channels! So we recommend to have an eye on these details of the NIT very carefully.

IP-OUTPUT Parameters:

<input type="button" value="Default"/> <input type="button" value="Apply"/>				

Addresses, Ports and mode can be adjusted here.

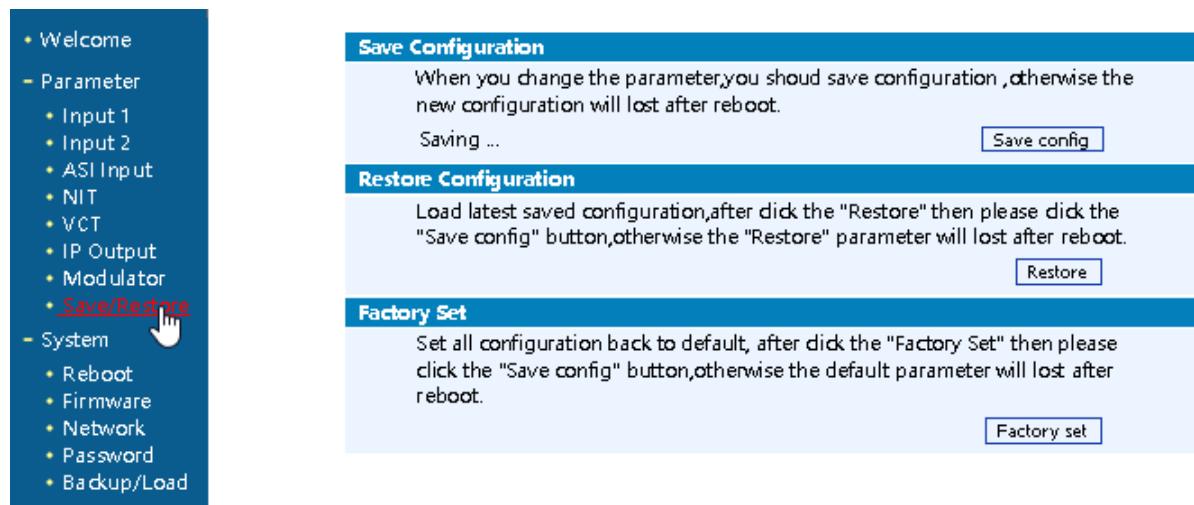

DVB-RF settings:

Modulator Configuration

RF On (ABCD)	<input checked="" type="checkbox"/> <input checked="" type="checkbox"/> <input checked="" type="checkbox"/> <input checked="" type="checkbox"/>
Standard	J.83A(DVB-C)
Constellation	256 QAM
Symbol Rate	6.750 Msps (5.000 - 9.000 Msps)
RF Frequency A	480.000 MHz (30.000 - 1000.000 MHz)
RF Frequency B	488.000 MHz (30.000 - 1000.000 MHz)
RF Frequency C	496.000 MHz (30.000 - 1000.000 MHz)
RF Frequency D	504.000 MHz (30.000 - 1000.000 MHz)
RF Outlevel	-10.0 dBm (-30.0 - -10.0 dBm)
Output E Bitrate	48.000 Mbps (0.000 - 99.000 Mbps)
ASI Output	Output E
<input type="button" value="Default"/> <input type="button" value="Apply"/>	

Here the settings for the Outputs A B C D (RF channels) ON/OFF and selection of what ASI out can be assigned to. The Multiplex ASI output can only be as high as 99 Mb/s while each RF-Channel Datrates depending on the modes setup: Symbol rate is usually 6750-6850 and 256 QAM the highest and best value for QAM out: max. Datarate is 51 Mb/s incl. Zero packets on PID8191dec. **Please set the RF-Center frequencies of the QAM channels according to the values shown in the Annex of this document** and adjust the QAM output levels according to your combining network. Hint: QAM265 level are to be set to 4dB less than PAL channels while QAM64 has to be 10dB less than PAL (according to Kabel Deutschland Technical Specifications).

Safe and Restore the configuration:

The screenshot shows a configuration menu on the left with the following structure:

- Welcome
- Parameter
 - Input 1
 - Input 2
 - ASI Input
 - NIT
 - VCT
 - IP Output
 - Modulator
 - Save/Restore**
- System
 - Reboot
 - Firmware
 - Network
 - Password
 - Backup/Load

The 'Save/Restore' item is highlighted with a red circle and a cursor icon.

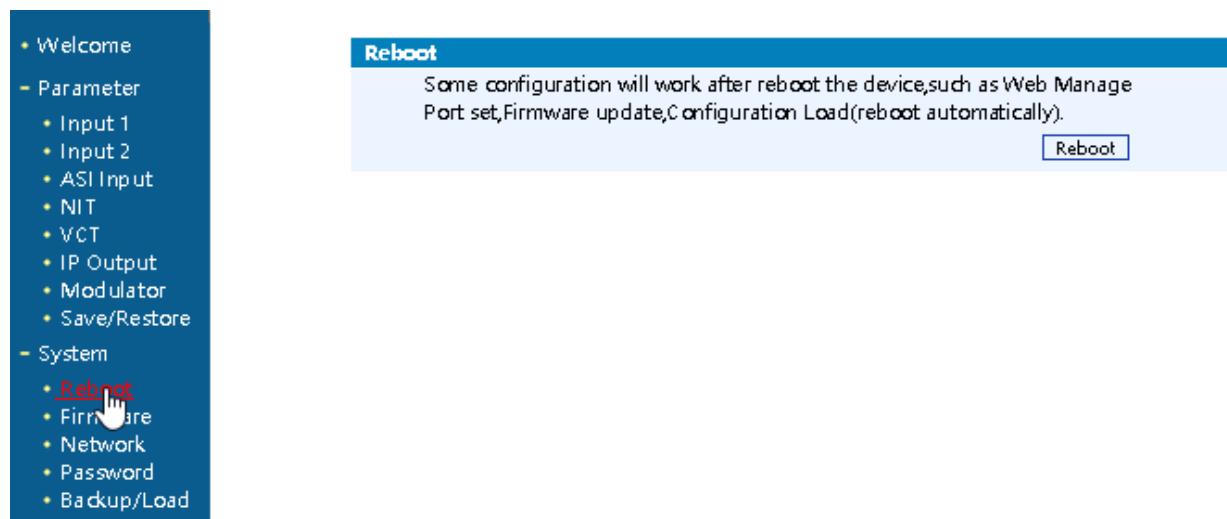

Save Configuration
When you change the parameter,you shoud save configuration ,otherwise the new configuration will lost after reboot.
Saving ...

Restore Configuration
Load latest saved configuration,after click the "Restore" then please click the "Save config" button,otherwise the "Restore" parameter will lost after reboot.

Factory Set
Set all configuration back to default, after click the "Factory Set" then please click the "Save config" button,otherwise the default parameter will lost after reboot.

NOTE: The Symbol Rate has to be entered with the (american style) “.” As the thousand komma:
Like: **6.900** Msps (**Mega** symbols per second).

In case accidentally something happened, the factory settings can be restored.

The screenshot shows a configuration menu on the left with the following structure:

- Welcome
- Parameter
 - Input 1
 - Input 2
 - ASI Input
 - NIT
 - VCT
 - IP Output
 - Modulator
 - Save/Restore**
- System
 - Reboot**
 - Firmware
 - Network
 - Password
 - Backup/Load

The 'Reboot' item is highlighted with a red circle and a cursor icon.

Reboot
Some configuration will work after reboot the device,such as Web Manage Port set,Firmware update,Configuration Load(reboot automatically).

The Reboot is sometimes necessary if essential parameters has been changed.

Firmware updates can be installed in case there are new versions available from the engineering fixing issues or adding improvements. -> Please ask us if something is happening:

Firmware

Warning: 1. Update firmware to get new function,please choose the right firmware to update.If you use a wrong file,the device may not work.
 2. Update will keep a long time,please do not turn off the power, otherwise the device will not work.
 3. After update,you must reboot device manually.

File: Keine Datei ausgewählt.

Password

Password

Modify the login name and password to make the device safely.If forget the name or password,you can reset it by keyboard in LCD menu. The default login name and password is "admin".Also please note the capital character and lowercase character.

Current UserName:	<input type="text" value="admin"/>
Current Password:	<input type="password"/>
New UserName:	<input type="text"/>
New Password:	<input type="password"/>
Confirm New Password:	<input type="password"/>
Keyboard and LCD Lock	<input type="checkbox"/>
<input type="button" value="Apply"/>	

The default username and password for the administrator can be changed.

But DO NOT forget that or write it down somewhere ;-)

Also the Front panel operation can be blocked here.

Some useful remarks:

- Installing the device in the place in which environmental temperature between 0 to 45 °C
- Assure good ventilation for the heat-sink on the rear panel and other heat-sink holes if necessary
- Checking the input AC within the power supply working range and the connection is correct before switching on device
- Checking the RF output level varies within tolerant range if it is necessary (For RF devices)
- Checking whether all signal cables have been properly connected
- Frequently switching on/off device is not recommended; the interval between every switching on/off should be more than 10 seconds.

Packing List

MPEG4 HD IP Encoder

1 pcs

User Manual	1 pcs
Power Cord (depending on Country)	1 pcs
some HDMI Cables maybe or BNC dep. on Model.	

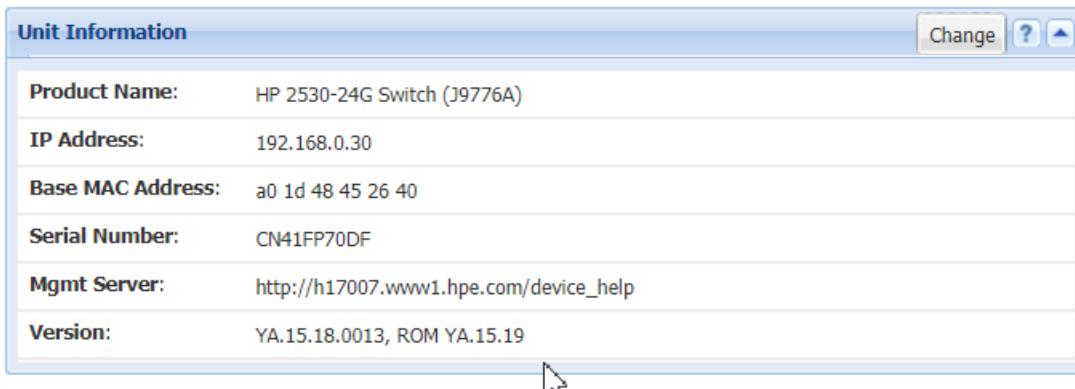

Some useful hints about network streamings:

We recommend to make yourself familiar with the h.264 AVC (and HEVC depending on Encoder unit) encoding methods as well as streaming itself.

IGMP is one of the important mechanism for IPTV securing overloading of i.e. STB's by pushing too many streams to it.

As a **Multicast capable Switch** we recommend is the HP (ARUVA) 2530 24G or 48G.

(For Floor switches we have an own branded one and support IGMP as well) IGMP should be set to ON in the port configs. The latest HP Firmware might not be the best choice. Better to test IGMP functions before installation into a HOT running System and eventually do a downgrade of the Firmware. This one works:

Encoding and codec parameters

We recommend to check https://en.wikipedia.org/wiki/H.264/MPEG-4_AVC for basics and HEVC-specialities.
Loss resilience features including:

- A Network Abstraction Layer (NAL) definition allowing the same video syntax to be used in many network environments. One very fundamental design concept of H.264 is to generate self-contained packets, to remove the header duplication as in MPEG-4's Header Extension Code (HEC).^[36] This was achieved by decoupling information relevant to more than one slice from the media stream. The combination of the higher-level parameters is called a parameter set.^[36] The H.264 specification includes two types of parameter sets: Sequence Parameter Set (SPS) and Picture Parameter Set (PPS). An active sequence parameter set remains unchanged throughout a coded video sequence, and an active picture parameter set remains unchanged within a coded picture. The sequence and picture parameter set structures contain information such as picture size, optional coding modes employed, and macroblock to slice group map.^[36]
- Flexible macroblock ordering (FMO), also known as slice groups, and arbitrary slice ordering (ASO), which are techniques for restructuring the ordering of the representation of the fundamental regions (*macroblocks*) in pictures. Typically considered an error/loss robustness feature, FMO and ASO can also be used for other purposes.
- ...

- Switching slices, called SP and SI slices, allowing an encoder to direct a decoder to jump into an ongoing video stream for such purposes as video streaming bit rate switching and "trick mode" operation. When a decoder jumps into the middle of a video stream using the SP/SI feature, it can get an exact match to the decoded pictures at that location in the video stream despite using different pictures, or no pictures at all, as references prior to the switch.

General notes about Streams:

Multicast Address Ranges:

We recommend, that the addressing of your Multicast streams should be in conjunction with this listings to avoid conflicts with other network equipment or protocols.

<https://www.iana.org/assignments/multicast-addresses/multicast-addresses.xhtml>

One small part from this:

IPv4 Multicast Address Space Registry

Last Updated

2018-01-05

Expert(s)

Stig Venaas

Note

Host Extensions for IP Multicasting [[RFC1112](#)] specifies the extensions required of a host implementation of the Internet Protocol (IP) to support multicasting. The multicast addresses are in the range 224.0.0.0 through 239.255.255.255. Address assignments are listed below.

The range of addresses between 224.0.0.0 and 224.0.0.255, inclusive, is reserved for the use of routing protocols and other low-level topology discovery or maintenance protocols, such as gateway discovery and group membership reporting. Multicast routers should not forward any multicast datagram with destination addresses in this range, regardless of its TTL.

Available Formats  [XML](#)  [HTML](#)  [Plain text](#)

Registries included below

- [Local Network Control Block \(224.0.0.0 - 224.0.0.255 \(224.0.0/24\)\)](#)

- [Unicast-Prefix-based IPv4 Multicast Addresses](#)
- [Scoped Multicast Ranges](#)
- [Relative Addresses used with Scoped Multicast Addresses](#)

Multicast (as opposed to unicast) is used to send UDP packets from 1 source to multiple destination servers. This is useful for example for streaming from a satellite/DVB-T receiver to multiple receiving PCs for playback. Multicast can also be used on the output of an encoder to feed multiple streaming servers. Multicast only works with UDP and is not possible with TCP due to the 2 way nature of TCP, most commonly multicast is used with RTP and MPEG2-TS.

A multicast IP address must be chosen according to IANA information, we recommend using an address in the range **239.0.0.0 to 239.255.255.255** as this is reserved for private use. Using multicast addresses in the 224.0.0.0 range may clash with existing services and cause your stream to fail. For more details see <http://www.iana.org/assignments/multicast-addresses/multicast-addresses.xml>

Choosing a UDP port number for multicast streams is also important. Even if you use a different multicast IP for each of your streams, we strongly recommend using different UDP port numbers as well. This is because a server and all software running on the server receives ALL multicast traffic on an open port and extra processing is required to filter out the required traffic. If each stream arrives on a different port, the server can safely ignore any traffic on ports that are not open. Port numbers MUST be chosen so that don't clash with any existing services or ephemeral ranges. The ephemeral range for Windows Vista, 7, 2008 is 49152 to 65535, for older Windows it is 1025 to 5000 and for Linux it is 32768 to 61000. For more information on Windows see <http://support.microsoft.com/kb/929851> Care should also be taken to avoid system ports 0 to 1024. See <http://www.iana.org/assignments/service-names-port-numbers/service-names-port-numbers.xml> Generally one of the unassigned User Ports (**1024–49151**) should be used, you can run the **netstat -abn** (as admin under windows) command to see which ports are currently in use.

Registered port

A **registered port** is a [network port](#) (a sub-address defined within the [Internet Protocol](#), in the range 1024–49151) assigned by the [Internet Assigned Numbers Authority](#) (IANA) (or by [Internet Corporation for Assigned Names and Numbers](#) (ICANN) before March 21, 2001,^[1] or by USC/ISI before 1998) for use with a certain protocol or application.

Ports with numbers 0–1023 are called *system or well-known ports*; ports with numbers 1024–49151 are called *user or registered ports*, and ports with numbers 49152–65535 are called *dynamic and/or private ports*.^[2] Both system and user ports are used by transport protocols (TCP, UDP, DCCP, SCTP) to indicate an application or service.

- **Ports 0–1023** – system or [well-known ports](#)
- **Ports 1024–49151** – user or registered ports
- **Ports >49151** – dynamic / private ports

https://en.wikipedia.org/wiki/List_of_TCP_and_UDP_port_numbers

Range for Ephemeral port

The [Internet Assigned Numbers Authority](#) (IANA) suggests the range 49152 to 65535 ($2^{15}+2^{14}$ to $2^{16}-1$) for dynamic or private ports.^[1]

Many [Linux kernels](#) use the port range 32768 to 61000.^{[\[note 2\]](#)} [FreeBSD](#) has used the IANA port range since release 4.6. Previous versions, including the [Berkeley Software Distribution](#) (BSD), use ports 1024 to 5000 as ephemeral ports.^{[\[2\]](#)[\[3\]](#)}

[Microsoft Windows](#) operating systems through XP use the range 1025–5000 as ephemeral ports by default.^[4] [Windows Vista](#), [Windows 7](#), and [Server 2008](#) use the IANA range by default.^[5] [Windows Server 2003](#) uses the range 1025–5000 by default, until Microsoft security update MS08-037 from 2008 is installed, after which it uses the IANA range by default.^[6] Windows Server 2008 with Exchange Server 2007 installed has a default port range of 1025–60000.^[7] In addition to the default range, all versions of Windows since Windows 2000 have the option of specifying a custom range anywhere within 1025–65535.^{[8][9]}

Packet structure

UDP Header

<i>Offsets</i>	<i>Octet</i>	0	1	2	3																					
<i>Octet</i>	<i>Bit</i>	0 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30 31																								
0	0	Source port										Destination port														
4	32	Length										Checksum														

The UDP header consists of 4 fields, each of which is 2 bytes (16 bits).^[1] The use of the fields "Checksum" and "Source port" is optional in IPv4 (pink background in table). In IPv6 only the source port is optional (see below).

Source port number

This field identifies the sender's port when meaningful and should be assumed to be the port to reply to if needed. If not used, then it should be zero. If the source host is the client, the port number is likely to be an ephemeral port number. If the source host is the server, the port number is likely to be a well-known port number.^[4]

Destination port number

This field identifies the receiver's port and is required. Similar to source port number, if the client is the destination host then the port number will likely be an ephemeral port number and if the destination host is the server then the port number will likely be a well-known port number.^[4]

Length

A field that specifies the length in bytes of the UDP header and UDP data. The minimum length is 8 bytes because that is the length of the header. The field size sets a theoretical limit of 65,535 bytes (8 byte header + 65,527 bytes of data) for a UDP datagram. However the actual limit for the data length, which is imposed by the underlying [IPv4](#) protocol, is 65,507 bytes (65,535 – 8 byte UDP header – 20 byte [IP header](#)).^[4]

In IPv6 [jumbograms](#) it is possible to have UDP packets of size greater than 65,535 bytes.^[15] [RFC 2675](#) specifies that the length field is set to zero if the length of the UDP header plus UDP data is greater than 65,535.

Checksum

The [checksum](#) field may be used for error-checking of the header and data. This field is optional in IPv4, and mandatory in IPv6.^[16] The field carries all-zeros if unused.^[17]

RTP:

a part from: <https://tools.ietf.org/html/rfc3550>

Chapter 11:

RTP relies on the underlying protocol(s) to provide demultiplexing of

RTP data and RTCP control streams. For UDP and similar protocols,

RTP SHOULD use an even destination port number and the corresponding

RTCP stream SHOULD use the next higher (odd) destination port number.

For applications that take a single port number as a parameter and derive the RTP and RTCP port pair from that number, if an odd number is supplied then the application SHOULD replace that number with the next lower (even) number to use as the base of the port pair. For applications in which the RTP and RTCP destination port numbers are specified via explicit, separate parameters (using a signaling protocol or other means), the application MAY disregard the restrictions that the port numbers be even/odd and consecutive although the use of an even/odd port pair is still encouraged. The RTP and RTCP port numbers MUST NOT be the same since RTP relies on the port numbers to demultiplex the RTP data and RTCP control streams.

In a unicast session, both participants need to identify a port pair for receiving RTP and RTCP packets. Both participants MAY use the same port pair. A participant MUST NOT assume that the source port of the incoming RTP or RTCP packet can be used as the destination port for outgoing RTP or RTCP packets. When RTP data packets are being sent in both directions, each participant's RTCP SR packets MUST be sent to the port that the other participant has specified for reception of RTCP. The RTCP SR packets combine sender information for the outgoing data plus reception report information for the incoming data. If a side is not actively sending data (see [Section 6.4](#)), an RTCP RR packet is sent instead.

RTP (Real-Time Transport Protocol)

Safety instructions

Read the safety instructions carefully before assembling or commissioning the device and ensure that you comply with them

1. Installation

- **Danger:** The device may **only** be installed and started up by competent people (**see EN 60065**). 
- **Danger:** The device and the peripheral distribution devices must be earthed properly (potential equalization) in accordance with **EN 60728-11 before Commissioning** and remain earthed even when the device is dismantled.
- **Danger:** The device may not be installed on a flammable base (**risk of fire**).
- **Danger:** Only connect the device to a socket that is installed correctly and connected to devices that has an earth conductor
(Depending on Model andUsage).
- **Danger:** Plan the assembly or installation location to ensure that children cannot play with the device and its connections.
There is a risk of electric shock (**Danger of death**).
- **Danger:** Select an assembly or installation location in which fluids or objects cannot get into the device under any circumstances (e.g. condensation, water for watering plants, etc.).
- **Danger:** Ventilation slots and refrigeration units are important function elements on the devices. If devices have refrigeration units or ventilation slots, you must ensure that they are never covered or built over. Also ensure that there is sufficient air circulation around the device. This prevents possible damage to the device and the **risk of fire due** to overheating. Ensure a minimum of **clearance of 20cm** between the device and other objects.
- **Danger:** The assembly or installation location must allow all connected cables to be laid safely. Cables and power supply cables must not be damaged or crushed by any objects. Furthermore, ensure that cables are not laid in the immediate vicinity of sources of heat (e.g. radiators, other electrical devices, fireplaces, etc.) (**Risk of fire**), (**risk of electric shock danger of death**)
- **Danger:** In order to prevent damage to the device, as well as possible subsequent damage (**risk of fire**), devices intended for installation on the wall are only permitted to be installed on a level surface and not **above head height**.
- **Warning:** (Only for optical transmitters and their peripheral distribution devices) Never look directly or indirectly into the laser beam. Only connect the device to the power supply once all optical lines are connected securely. 
- **Warning:** The safety regulations in the relevant current standards **EN 60728-11** and **EN 60065** must be complied with.
- **Warning:** Comply with all applicable national safety regulations and standards.
- **Warning:** The device's mains plug must be easily accessible at all times.
- **Warning:** Follow all instructions in the device-specific operating manual

2. Operation

- **Danger:** The device is only permitted to be operated in dry rooms in a non-tropical climate. In damp rooms or outdoors, there is the risk of short circuits (**risk of fire**) or electric shock (**danger of death**).
- **Danger:** Do not insert any objects through the ventilation slot. Risk of electric shock (**danger of death**).
- **Danger:** Do not put any containers filled with liquid (e.g. vases) on the device. There is a risk of electric shock (**danger of death**) or (**risk of fire**). 
- **Danger:** No open sources of fire such as burning candles are permitted to be placed on the device (**risk of fire**).

- **Danger:** Ensure that there is a clearance of at least 20cm around the device. The device ventilation is not permitted to be impaired by covering the
- Ventilation openings with objects such as newspapers, tablecloths, curtains, etc. (**risk of fire**).
- **Warning:** Follow all instructions in the device-specific operating manual.

3. Maintenance

- **Danger:** Maintenance tasks must always be carried out by competent people (**see EN 60065**).
- **Danger:** Do not carry out servicing work during thunderstorms. There is a risk of electric shock (**danger of death**). 
- **Warning:** (Only for devices with batteries): Risk of explosion if the battery is replaced improperly. Only replace with the same type! 
- **Warning:** Batteries must not be subjected to excessive heat such as sunlight, fire or similar (**risk of explosion**). 
- **Warning:** Only use the manufacturer's accessories or accessories with identical technical properties.
- **Warning:** (For optical transmitters and their peripheral distribution devices) unplug the mains plug before dismantling the device.

4. Repairs

- **Danger:** The device may only be opened by competent people (see EN 60065). Before opening the device, unplug the mains plug or disconnect the power supply; otherwise there is a danger of death! The device is only permitted to be connected to the power and operated when the mains adaptor cover is installed. 
This also applies when you clean the device or work on the connections.
- **Danger:** Repairs on the device may only be carried out by a specialist (**see EN 60065**) observing the applicable VDE (German Association for Electrical, Electronic & Information Technologies) guidelines.
- **Danger:** Only use components of the same type and with identical technical properties for the repair. Otherwise, there is a risk of electric shock (**danger of death**) and **risk of fire**.
- **Warning:** (For optical transmitters and their peripheral distribution devices) unplug the mains plug before dismantling the device.

If you have any queries regarding repairs, please contact our company service: E-mail: info@blankom.de,
[contact: www.blankom.de](http://www.blankom.de) 

5. Sale

- **Caution:** If the device is sold, these safety instructions and the operating manual for the relevant device must be handed over to the purchaser. 

6. Disposal

- **Caution:** Dispose of the device in accordance with the applicable environmental regulations. 
- **Caution:** Dispose of batteries (if present) in accordance with the applicable environmental regulation... 
- Cartons and all pcs. of the packaging can be sent back to us for recycling for sustainable environment protection.

Sicherheitshinweise

Sicherheitshinweise bitte vor Montage bzw. Inbetriebnahme des Gerätes sorgfältig lesen und befolgen.

1. Installation

Gefahr: Das Gerät darf ausschließlich von sachverständigen Personen (siehe EN 60065), installiert und in Betrieb genommen werden.

Gefahr: Das Gerät und/oder die Verteilperipherie muß vor Inbetriebnahme gemäß EN 60728-11 vorschriftsmäßig geerdet sein (Potentialausgleich) und bleiben, auch wenn das Gerät ausgebaut wird.

Gefahr: Das Gerät darf nicht auf brennbarem Untergrund montiert werden (Brandgefahr).

Gefahr: Schließen Sie das Gerät nur an eine vorschriftsmäßig installierte Steckdose mit Schutzleiter an.

Gefahr: Planen Sie den Montage - bzw. Aufstellungsort so, daß Kinder nicht am Gerät und dessen Anschlüssen spielen können.

Es droht Gefahr durch elektrischen Schlag (Lebensgefahr).

Gefahr: Wählen Sie einen Montage - bzw. Aufstellungsort, an dem unter keinen Umständen Flüssigkeiten oder Gegenstände in das Gerät gelangen können (z.B. Kondenswasser, Gießwasser etc.).

Gefahr: Lüftungsschlitzte und Kühlkörper sind wichtige Funktionselemente an den Geräten. Bei Geräten, die Kühlkörper oder Lüftungsschlitzte haben, muß daher unbedingt darauf geachtet werden, daß diese keinesfalls abgedeckt oder zugebaut werden. Sorgen Sie außerdem für eine großzügig bemessene Luftzirkulation um das Gerät. Damit verhindern Sie mögliche Schäden am Gerät sowie Brandgefahr durch Überhitzung.

Gewährleisten Sie einen Mindestabstand von 20cm um das Gerät zu anderen Gegenständen.

Gefahr: Der Montage- bzw. Aufstellort muß eine sichere Verlegung aller angeschlossenen Kabel zulassen. Stromversorgungskabel sowie Zuführungskabel dürfen nicht durch irgendwelche Gegenstände beschädigt oder gequetscht werden. Es ist darüber hinaus unbedingt darauf zu achten, daß Kabel nicht in die direkte Nähe von Wärmequellen verlegt werden (z.B. Heizkörper, andere Elektrogeräte, Kamin etc.) (Brandgefahr), (Gefahr durch elektrischen Schlag).

Gefahr: Um sowohl Beschädigungen am Gerät als auch mögliche Folgeschäden (Brandgefahr) zu vermeiden, dürfen für Wandmontage vorgesehene Geräte nur auf einer ebenen Grundfläche montiert werden und nicht über Kopf.

Warnung: (Nur für optische Sender sowie deren Verteilperipherie) Blicken Sie auf keinen Fall direkt oder indirekt in den Laserstrahl. Schließen Sie das Gerät erst an die Stromversorgung an, wenn alle elektrischen und optischen Leitungen sicher verbunden sind.

Warnung: Die Sicherheitsbestimmungen der jeweils aktuellen Normen EN 60728-11 und EN 60065 sind zwingend einzuhalten.

Warnung: Befolgen Sie auch alle anwendbaren nationalen Sicherheitsvorschriften und Normen.

Warnung: Der Netzstecker des Gerätes muß jederzeit leicht erreichbar sein.

Warnung: Befolgen Sie alle Instruktionen in den gerätespezifischen Bedienungsanleitungen

2. Betrieb

Gefahr: Das Gerät darf nur in trockenen Räumen bei nicht tropischem Klima betrieben werden. In feuchten Räumen oder im Freien besteht die Gefahr von Kurzschluß (Brandgefahr) oder elektrischen Schlag (Lebensgefahr).

Gefahr: Stecken Sie keine Gegenstände durch die Lüftungsschlitzte. Gefahr durch elektrischen Schlag (Lebensgefahr).

Gefahr: Stellen Sie keine mit Flüssigkeit gefüllten Gefäße (wie z. B. Vasen) auf das Gerät. Es droht Gefahr durch elektrischen Schlag (Lebensgefahr) oder (Brandgefahr).

Gefahr: Es dürfen keine offenen Brandquellen, wie z. B. brennende Kerzen, auf das Gerät gestellt werden (Brandgefahr).

Gefahr: Sorgen Sie für einen Freiraum von mindestens 20cm um das Gerät. Die Belüftung des Gerätes darf nicht durch Abdecken der Belüftungsöffnungen mit

Gegenständen wie z. B. Zeitungen, Tischdecken, Gardinen usw. behindert werden (Brandgefahr).

Warnung: Befolgen Sie alle Instruktionen in der gerätespezifischen Bedienungsanleitung.

4. Wartung

Gefahr: Wartungsarbeiten sind stets von sachverständigen Personen (siehe EN 60065) vorzunehmen.

Gefahr: Keine Servicearbeiten bei Gewitter. Es droht Gefahr eines elektrischen Schlags (Lebensgefahr).

Warnung: (nur für Geräte mit Batterie): Explosionsgefahr bei unsachgemäßem Auswechseln der Batterie. Ersatz nur durch den gleichen Typ!

Warnung: Batterien dürfen nicht übermäßiger Wärme wie Sonnenschein, Feuer oder dergleichen ausgesetzt werden (Explosionsgefahr).

Warnung: Verwenden Sie nur das Zubehör des Herstellers oder Zubehör mit identischen technischen Eigenschaften.

Warnung: (Bei optischen Sendern sowie deren Verteilperipherie) ziehen Sie den Netzstecker bevor das Gerät ausgebaut wird.

5. Reparatur

Gefahr: Das Gerät darf nur durch sachverständige Personen (siehe EN 60065) geöffnet werden. Vor Öffnen des Gerätes Netzstecker ziehen

bzw. Stromzuführung entfernen, andernfalls besteht Lebensgefahr! Das Gerät darf nur mit montierter Netzteilabdeckung an Spannung angeschlossen und betrieben werden. Dies gilt auch, wenn Sie das Gerät reinigen oder an den Anschlüssen arbeiten.

Gefahr: Reparaturen am Gerät sind ausschließlich vom Fachmann (siehe EN 60065) unter Beachtung der geltenden VDE-Richtlinien durchzuführen.

Gefahr: Verwenden Sie nur Bauteile des gleichen Typs und mit identischen technischen Eigenschaften für die Reparatur, andernfalls droht Gefahr eines elektrischen Schlags (Lebensgefahr) und Brandgefahr.

Warnung: (Bei optischen Sendern sowie deren Verteilperipherie) ziehen Sie den Netzstecker bevor das Gerät ausgebaut wird.

Bei Fragen zur Reparatur wenden Sie sich an den IRENIS-Service:

E-Mail: info@blankom.de, Kontakt: www.blankom.de

6. Verkauf

Vorsicht: Im Falle eines Verkaufs müssen diese Sicherheitshinweise und die Bedienungsanleitung des entsprechenden Geräts dem Käufer ausgehändigt werden.

7. Entsorgung

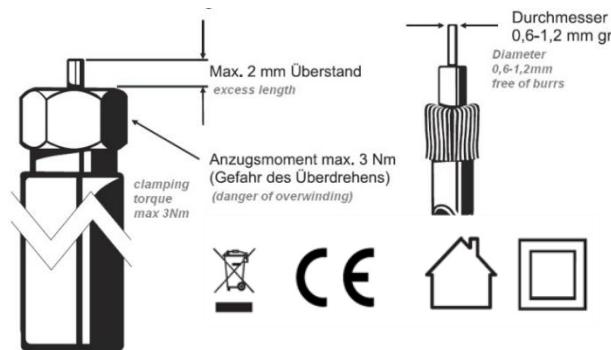

Vorsicht: Entsorgen Sie das Gerät entsprechend den geltenden umweltrechtlichen Bestimmungen. Elektrische und elektronische Geräte dürfen nicht in den Hausmüll!

Vorsicht: Entsorgen Sie Batterien (falls vorhanden), entsprechend den geltenden umweltrechtlichen Bestimmungen.

Verpackungen können an uns zurückgeschickt werden. Wir kümmern uns um Recycling und/oder fachgerechte Entsorgung.

Installation guide for F-connectors:

/ Installationshinweis für den F-Anschluß:

Die LNB-Anschlüsse sind meist entsprechend gekennzeichnet

The LNC –connectors are almost marked as:

HH = Horizontal High-Band

HL = Horizontal Low-Band = LH

VL = Vertical Low-Band = LV

Elektronische Geräte gehören nicht in den Hausmüll, sondern müssen - gemäß Richtlinie 2002/96/EG DES EUROPÄISCHEN PARLAMENTS UND DES RATES vom 27. Januar 2003 über Elektro- und Elektronik-Altgeräte fachgerecht entsorgt werden.

Bitte geben Sie dieses Gerät am Ende seiner Verwendung zur Entsorgung an den dafür vorgesehenen öffentlichen Sammelstellen ab.

Electronic equipment is not household waste - in accordance with directive 2002/96/EC OF THE EUROPEAN PARLIAMENT AND THE COUNCIL dated 27th January 2003 on used electrical and electronic equipment, it must be disposed of properly.

At the end of its service life, take this unit for disposal to an appropriate official collection point

Installation and safety instructions / Montage und

Sicherheitshinweise

- Die beschriebenen Geräte dienen ausschließlich der Installation von Satelliten-Empfangsanlagen.
- *The equipment described is designed solely for the installation of satellite receiver systems.*
- Jegliche anderweitige Nutzung oder die Nichtbeachtung dieses Anwendungshinweises hat den Verlust der Gewährleistung bzw. Garantie zur Folge.
- *Any other use, or failure to comply with these instructions, will result in voiding of warranty cover.*
- Die Geräte dürfen nur in trockenen Innenräumen montiert werden. Nicht auf oder an leicht entzündlichen Materialien montieren.
- *The equipment may only be installed in dry indoor areas. Do not mount on or against highly combustible materials.*
- Die Geräte sind mit einer Potenzial-Ausgleichsleitung (Cu, mindestens 4 mm²) zu versehen.
- *The equipment must be provided with an earthing wire (Cu, at least 4 mm²).*
- Die Sicherheitsbestimmungen der jeweils aktuellen Normen EN 60728-11 und EN 60065 sind zu beachten.
- *The safety regulations set out in the current EN 60728-11 and EN 60065 standards must be complied with*
- Verbindungsstecker: HF-Stecker 75 Ohm (Serie F) nach EN 61169-24
- *Connector: HF plug 75 Ohm (series F) to EN 61169-24.*
- **Nicht benutzte Teilnehmerausgänge** sollten mit 75-Ohm Widerständen (z. B. EMK 03) abgeschlossen werden. (Verringerung der terrestrischen Signalwelligkeit)
- *Unused subscriber ports should be closed off by 75 Ohm resistors (e.g. EMK 03).*
- **Nicht benutzte Kaskadenausgänge** sind mit 75 Ohm Widerständen inkl. DC-Blocker abzuschließen. 75 Ohm Widerstände ohne Gleichspannungssperren können das Gerät beschädigen!
- *Unused trunk outputs must be terminated with 75Ohm resistors including DC Blocker. Otherwise the device may be inoperable or damaged.*
- Bitte überprüfen Sie die Anlage vor Inbetriebnahme auf evtl. Kurzschlüsse der Koaxial-Kabel. Es ist darauf zu achten, dass die Eingangspegel der SAT-Ebenen möglichst gleich hoch sind. Power-LEDs zeigen den Betrieb an. Falls die nicht leuchten, bitte die Stromzufuhr kontrollieren.
- *Please check the installation against shortage in coax cables and connectors before switching on. The input levels should be adjusted accordingly. Power-LED's showing operational mode. If this is not illuminated, please check the power source.*
- **Stromführendes Gerät**
- **Current-carrying unit**
- Nicht öffnen oder am Gerät manipulieren!
- *Do not open or tamper with the unit!*
- Bei Arbeiten an der Anlage immer die Netzstecker aus der Steckdose ziehen!
- *When working on the system always unplug the mains plug from the wall socket!*
- Auf ausreichenden Abstand achten! Nach allen Seiten mind. 5 cm!
- *Ensure adequate clearance! Min. 5 cm to all sides!*
- Nicht über Kopf montieren.
- *Do not install overhead.*
- Für die Geräteentwärmung muss freie Luftzirkulation möglich sein. Überhitzungsgefahr!

- *Free circulation of air must be possible to discharge the heat emitted by the unit. Risk of overheating!*
- Zulässige Umgebungstemperatur -20 bis +50°C
- *Permissible ambient temperature -20 to +50°C*

Important notes: / Zur Beachtung

- Auf das Netzgerät dürfen keine mit Flüssigkeit gefüllten Gegenstände gestellt werden.
- *No liquid-filled items may be placed on top of the power supply unit.*
- Das Netzgerät darf nicht Tropf- oder Spritzwasser ausgesetzt sein.
- *The power supply unit must not be exposed to dripping or splashing water.*
- Der Netzstecker muss ohne Schwierigkeiten zugänglich und benutzbar sein.
- *The mains plug must be easily accessible and operable.*
- Das Gerät kann nur durch Ziehen des Netzsteckers vom Netz getrennt werden.
- *The only reliable method of disconnecting the unit from the mains is to unplug it.*
- Bei größerem Durchmesser des Kabel-Innenleiters als 1,2 mm bzw. Grat können die Gerätebuchsen zerstört werden.
- *If the inner cable conductor diameter is greater than 1.2 mm or in case of burr, the device sockets may be destroyed.*

Bitte installieren Sie die Anschlüsse gemäß dem Aufdruck auf den Geräten – falls vorhanden

Please install according to the sticker on the devices if shown.

Hinweis: Elektrische Installationen sollten nur durch geschultes Fachpersonal vorgenommen werden!

Note: Electrical installations should only be done by well-educated and skilled technicians!
